SHUTTERS: THE ULTIMATE WINDOW TREATMENT

There is no window covering that enhances the beauty of your home and shapes light as beautifully as shutters. Shutters are the ideal combination of elegance and functionality.

And no other window treatment makes quite the impression as fine quality shutters. Shutters can keep your home warmer in winter and cooler in summer. They can provide light control and privacy. Shutters give you total command of your space by allowing slight or great changes in your view, your privacy and the amount of sunlight you let in. Plus, shutters have a timeless appeal that can fit any decorating scheme, whether traditional or contemporary.

Shutters are often called "The Ultimate Window Treatment". And with ShutterSMART's PolyClad Hardwood design they will:

- *Give you full control of your living space by architecturally sculpting light and delivering superb noise and temperature control as compared to blinds and shades*
- *Deliver a timeless beauty that will never go out of style*
- *A clean look with no obstructing wands, ropes or tilters*
- *Enhance the curb appeal and resale value of your home*
- *Clean more easily than any other window covering*
- *Maintain their value longer than any other type of window covering*
- *Insulate your home significantly better than blinds, drapes or shades saving energy costs*
- *Be a perfect covering for sliding glass doors and French doors where other window coverings don't work*
- *Look like new for years to come*

THE BEAUTY OF FULL VIEW SHUTTERS

SHUTTERSMART IS THE SMART CHOICE

UNMATCHED ELEGANCE

ShutterSMART gives you beautiful, full views (there's never a fee to upgrade to the "hidden tilter" option) and our patented WoodTEX™ finish that provides the look, feel and warmth of wood.

CUSTOM BUILT IN NORTH AMERICA IN DAYS

Most shutters are manufactured in China, and orders typically take from 6 to 8 weeks to arrive. At ShutterSMART, we mold the poly and mill the wood, custom building every shutter in about 5 working days.

THE BEST SHUTTER CONSTRUCTION

Every shutter is custom hand built with a hardwood core (not MDF) clad with a poly surface. The solid poplar wood core has the strength of a wood shutter, yet the PolyClad surface allows for ease of maintenance. The combination delivers a traditional wood shutter that is elegant, strong and durable.

OUR LIFETIME WARRANTY

Wood shutter manufacturers do not warranty their painted wood finish. Our Lifetime Limited Warranty covers both the PolyClad surface and any manufacturing defects. Should you ever have any problem just call the number on your warranty card.

SHUTTERSMART'S POLYCLAD HARDWOOD SHUTTER: AWARDED THE WCMA "PRODUCT INNOVATION AWARD"

In recognition of its Carefree PolyClad wood construction and its wood-like Elegance, the Window Covering Manufacturers Association awarded ShutterSMART the "Product Innovation Award of the Year"

HARDWOOD CONSTRUCTION WORKS JUST LIKE AN ALL-WOOD SHUTTER

ShutterSMART looks and works just like a traditional wood shutter. The hardwood core delivers the strength to build large "door-like" panels that can be wide and tall. Only a solid wood shutter can build panels this strong.

CAREFREE POLYCLAD WOOD SHUTTERS

Our PolyClad surface will not peel, crack, fade or discolor under the hot sun that shines through your windows. Unlike painted shutters, ShutterSMART's PolyClad surface is paint free. It's easy to clean and will never need to be repainted or replaced.

POLYCLAD IS MAINTENANCE FREE

ShutterSMART is built with a rigid Poly vinyl surface that is clad over the hardwood. This surface will not dent, fade, peel or discolor. It's easy to clean, durable and low maintenance. The surface is completely paint free and will never need to be repainted.

HAND PICKED HARD WOODS NOT MDF

Every shutter is made with hand picked poplar and European Baltic birch woods. We do not use MDF (fiber board with formaldehyde adhesives) otherwise referred to as Composite materials to build our panels. The results are remarkable strength and durability in every panel.

TRIPLE DOWEL FURNITURE QUALITY JOINERY

The rails and stiles are joined using three two-inch hardwood dowels. This triple dowel joinery is only found in high quality furniture and ensures that panels never come apart.

THERMACORE

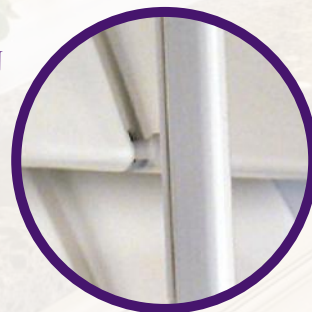

THERMACORE LOUVERS

SUPERIOR INSULATION AND WIDER PANELS

Our ThermaCore louvers are designed with a cellular air core creating the best in insulation and eliminating solid louver warpage problems caused by louver weight, humidity and the hot sun. And with our Aluminum reinforcement on large windows, we can make extra wide single panels that will not warp...guaranteed!

TWISTLOCK™ TILT ROD DESIGN NEVER PULLS APART

Instead of the staples used in most shutters, ShutterSMART uses a patented tilt rod hook design that twists and locks into each louver. These TwistLock™ hooks will never pull out of the louvers.

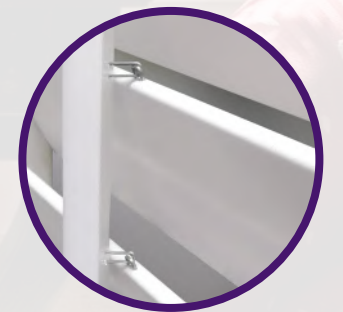

SOLID CORE

SOLIDCORE LOUVERS

SolidCore louvers with staples are also an option and are made of poly wood materials, delivering low maintenance when compared to wood shutters. Our solid poly louvers are attached to the tilt rod using staples, similar to a wood shutter.

CUSTOM DESIGNED SHUTTERS TO

PERFECTLY MATCH EVERY WINDOW

STANDARD FOLDING SHUTTERS

Standard folding shutters are the most popular choice and fit most windows. They are available as single panels or bi-folding panels, depending on your window size. These panels can be folded flat against the walls around an opening. Single panels are the most popular. Bi-fold panels are more traditional.

BI-PASS SHUTTERS

The bi-pass is very popular because it does not require room in front of the window for the panels to swing open. For a clear view in the open position, we've designed the double bi-pass which allows you to tilt open the louvers when the panels are stacked to one side. To give your slider a decorative finish look, add an optional decorative wood valance.

BI-FOLD SLIDER

Sliding shutters are designed specifically for large sliding glass doors. They are mounted on a smooth track with a beautiful valance to accent the frame. Sliding shutters are bi-fold or bi-pass in design.

T-POST SHUTTERS

T-post shutters are designed for wide or large windows that require additional strength for smooth operation. A decorative post is placed along a wide or large window to split the shutter into smaller segments.

FRENCH DOOR SHUTTERS

French door shutters are designed specifically for the popular French doors in many living areas. This shutter comes with a Slim Line frame that sits behind the panel, giving a clean look of a shutter panel on your window. This specialty frame design is offered as solid or as a cut out to accommodate traditional style door handles.

ARCH TOP SHUTTERS

Arches add charm and character to a home but also offer a particular set of challenges when it comes to privacy and light control. ShutterSMART's PolyClad shutters offer arch tops that are available in coordinated custom frames. Arch top shutters allow for a broad range of light filtering and privacy possibilities without hiding your beautiful arch top windows.

CUSTOMIZE YOUR SHUTTER DESIGN

TRADITIONAL TILT RODS

BACK SIDE TILT RODS

FULL VIEW TILT RODS

TOP OFF YOUR SHUTTER DESIGN

With Selections of Louvers, Colors, Tilt Rods and Accent Hinges

Every Shutter is custom designed for your home. Choose from our selection of tilt rod placement, colors, louver sizes, and accent hinges. Tilt rods can be placed in their traditional location in front of the shutter or can be hidden to deliver clear unobstructed views.

Color Choices

Shutters are available in white, swiss coffee, off white and a variety of specialty colors allowing you to match any setting.

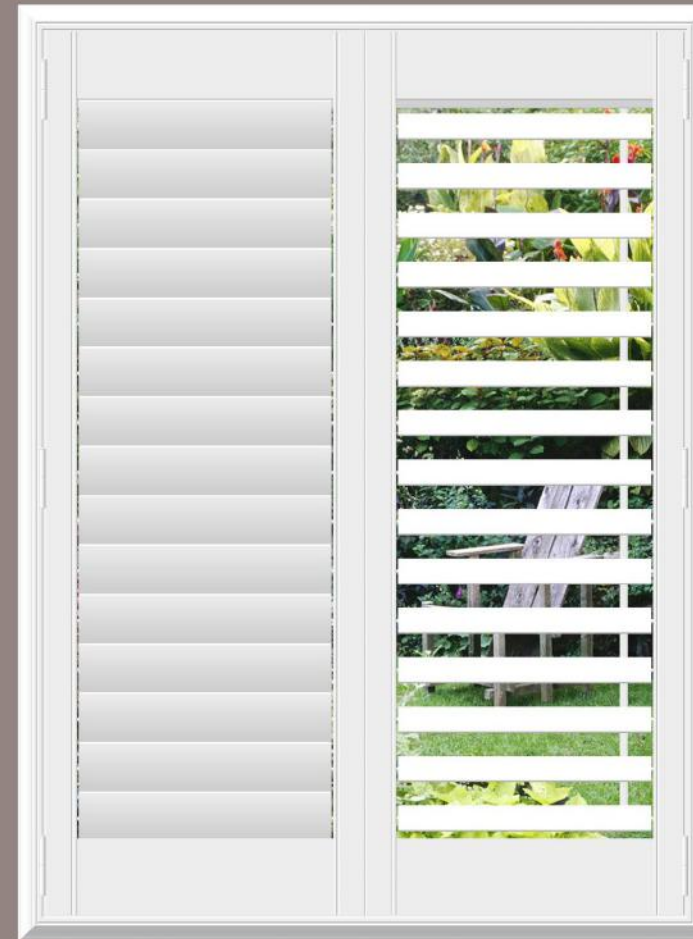

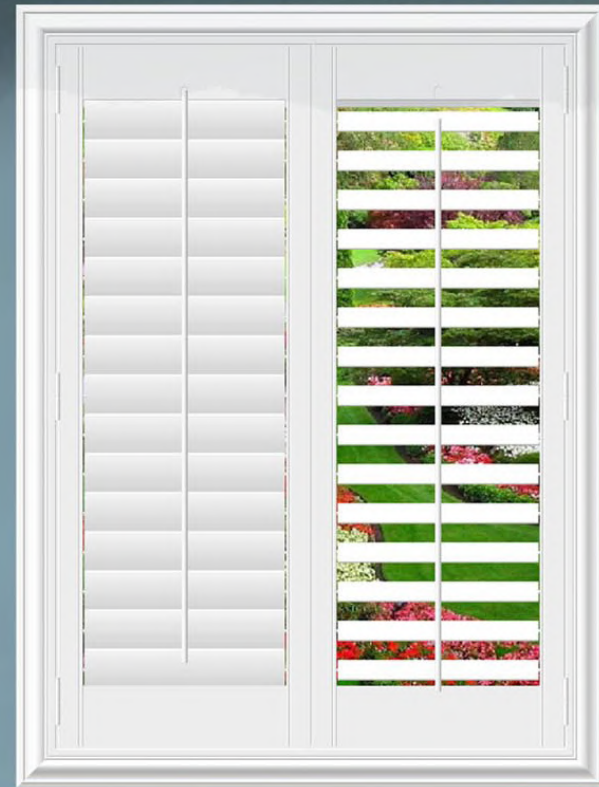

Louver Sizes

Louvers come in narrower 3" or wider 4" widths.

Accent Hinges

Hinges are color matched to your shutters or available in an accent brass or stainless steel.

Every window in your home is different. Our many options allow you to custom design a perfect fit for every window.

SHUTTERSMART POLYCLAD WOOD SHUTTERS

Since 1991, ShutterSMART has been the leading PolyClad wood shutter manufacturer in the U.S. Made from an innovative combination of hardwood and Polyresin, our award-winning shutters have it all. Elegant, unobstructed views, carefree low maintenance construction, and strong green credentials, with the proven smallest environmental footprint of any shutter alternatives.

ECO FRIENDLY AND ENERGY EFFICIENT

PolyClad shutters leave the smallest environmental footprint of any shutter alternatives. Poly vinyl is a man-made material that is never painted and has been found to perform best to environmental impact by the U. S. Green Building Council.

Paint free means there are no VOC emissions or solid wastes released into the environment while manufacturing our shutters. PolyClad shutters are durable so they'll never need repainting or replacing. They are recyclable and will never need to end up in a landfill. In fact, we recycle over a million pounds of polyvinyl material every year.

Poly Vinyl is 100% Paint Free. The result is no emissions, no VOCs and no solid waste into the environment.

The USGBC found that Poly Vinyl performs better relative to environmental impact than alternative materials studied.

Poly Vinyl is Lead Free.

Poly Vinyl is a fire resistant product certified by the California Fire Marshall.

Poly vinyl is 100% recyclable. If you ever want to change your window coverings, we offer a program to keep Poly vinyl out of landfills. Simply remove your shutters and call us to arrange a pickup.
